AGRO-METEOROLOGICAL ADVISORIES:

Crop	Pest/ Disease	Advisories
General Advisories: Proper drainage facilities should be ensured to protect the agricultural crops from pest & diseases during rainy season.		
Rice (Virippu) Tillering stage	Bacterial Leaf Blight (BLB)	As a prophylactic measure to manage Bacterial Leaf Blight during rainy season, apply bleaching powder @ 200g per one acre in the irrigation water.
Banana	Rhizome rot	Ensure drainage facilities in low land banana plantations. Due to the increase in rainfall, there is a chance of Rhizome rot in banana. As a precaution, drench the basin with three litre of pseudomonas solution (20g per one litre of water).
Pepper	Foot rot	As a prophylactic measure to manage foot rot during rainy season, add 2 kg Trichoderma to a mixture of 90 kg FYM & 10 kg neem cake and kept for two weeks with sufficient moisture. Add 2.5 kg of this mixture to each matured pepper vine to control foot rot disease.
Ginger	Soft rot	During rainy season, to avoid the spreading of soft rot in ginger, apply mixture of bleaching powder and lime in to the basin.
Vegetables (Cowpea)	Anthraco nose disease	During rainy season, there is a chance of Anthracnose disease in Cowpea. As a prophylactic measure, apply 1% Bordeaux mixture or spray copper oxychloride 3 gram per one litre of water.
Animal Husbandry	Deworming of animals should be done only after dung sample examination. In calves first dose of medicine should be given within 15 days of age.
