Agromet Advisory Bulletin for the District, Kannur

Bulletin Number:Pilicode/Knr-90/2023	Date:10/11/2023
--------------------------------------	-----------------

A. Weather Summary of preceding four days

Rainfall, mm	Max. temp., °C	Min. temp., °C	R. H., %	Wind speed, Km/h
158.5	31.1 – 34.7	23.6 – 26.6	72 – 96	02 - 08

B. Weather forecast for next five days

Parameters	11-11-2023	12-11-2023	13-11-2023	14-11-2023	15-11-2023
Average Rainfall, mm	5	0.1	0.1	0.1	0.1
Max. Temp, °C	31	35	35	35	35
Min. Temp,°C	25	26	26	26	26
Max. Relative Humidity, %	93	83	77	77	76
Min. Relative Humidity, %	72	48	40	39	38
Wind speed,km/h	2	4	2	2	2
Wind direction, degrees	270	270	250	230	270
Total cloud cover, octa	8	5	3	3	3

C. Agrometeorological Advisories

Crop	Stages	Problems	Agro-meteorological advisories	
	Light to Moderate rainfalls **			
General	The sky will be cloudy. High relative humidity will be experienced.			
conditions	Low night temperature and high day temperature will be experienced. Hence there will be distinct difference between day time temperature and night temperature.			
	There will be light rainfalls (from 2.5mm to 15.5 mm within a time span of 24 hours) in most places from November 10 th to November 14 th .			
General	Ensure sufficient drainage in crop fields.			
Recommen dations	The weather is favorable for the spread of fungal diseases like bud rot of coconut, mahali in arecanut, quick wilt in black pepper, rhizome rot diseases in ginger and turmeric.			
	Maintain hygiene conditions in crop fields. Infected and fallen nuts, leaves and tree parts should be removed from the fields and burnt.			
	Provide propping to tender stem crops like banana, tomato etc. Ensure sufficient drainage in crop fields. Beware of lightning. Give popping to slender stemmed and easily lodging crops like banana, vegetables etc. Take care while drying the harvested produces like rubber, cashew nut, copra etc., directly under the sun.			

Vegetables	Transplanting/ sowing	While preparing the land, incorporate lime @ 4kg/cent to the soil. Use Trichoderma enriched farm yard manure/compost. This will check the spread of wilt diseases. Before transplanting, dip the roots of the seedlings in slurry of pseudomonas (20g pseudomonas/litre of water) for 30 minutes. This will		
		help the seedlings to grow vigorously. Also the seedlings can be sprayed with diluted pseudomonas culture		
Coconut	All stages	Bud rot	Detection of disease at its early stage will help to adopt efficient corrective measures. Cut and remove the affected tissues from the crown and apply Bordeaux paste. After that cover the cut surface with polythene sheets to protect it from rain falls until new leaf emerges. Burn the removed tissues immediately. As a prophylactic measure spray 1% Bordeaux mixture into the axils of top	
Coconut	All stages	Stem bleeding	leaves of the surrounding palms Chisel out the affected parts and apply Bordeaux paste. Drench the palm basin (2m radius) with 40 litres of 1% Bordeaux mixture or soil drenching of Hexaconazole 25ml/25 litre of water. After one month, apply 5 kg Trichoderma enriched neem cake and 500g of Ayar® (micro nutrient mixture) In endemic areas, repeat fungicide drenching once in every four months	
Coconut	All stages	Leaf/inflorescence rot	Apply 1% Bordeaux mixture or 0.3% copper oxychloride solution in the heart of the crown. Apply lime. Spray borax also on leaves @ 5g/l. Also adopt all the basal management practices as described for the yellowing, above.	
Black pepper	All stages	Foot rot	As prophylactic measure, apply 150 gram of Trichoderma enriched neem cake - cow dung mixture in the basins of the vines and incorporate thoroughly with the soil. If disease already appeared, drench soil in the plant basins with Redomil 0.2% (2g/litre of water). Spray the same on the leaves also.	

Cashew Pre-bearing stages Tea mosquito bug Prophylactic measures: 1) The fungal biological control a Beavaria bassiana can be spraye 20g/L Or 2) Spray 1% Bordeaux mixture n with quinalphos (2ml/litre of Bordmixture) Swabbing (above five years old only) with mud slurry and coa kerosene mixture at 1:2 proportic recommended as a prophyl measure. This combination can externally applied on the stem height of 1.5m from the soil as we on the exposed roots. Okra All stages Shoot and Fruit borer Spray Coragen (3 ml in10 litres of w 2-3 times at weekly interval. Brinjal Flowering and fruit setting Shoots. Spray chlorantraniliprole (corage)	Banana	All stages	Pseudostem weevil	Adopt good field sanitation.
Cashew Flushing stage Root and stem borer With quinalphos (2ml/litre of Bord mixture) Swabbing (above five years old only) with mud slurry and coak kerosene mixture at 1:2 proportic recommended as a prophyl measure. This combination care externally applied on the stem height of 1.5m from the soil as we on the exposed roots. Okra All stages Shoot and Fruit borer Spray Coragen (3 ml in10 litres of w 2-3 times at weekly interval. Remove and destroy affected fruits shoots. Spray chlorantraniliprole (cot 3ml per 101 of water) 2-3 times at we was the strong the strong the strong three strongs.				Apply Beauveria bassiana @ 20 g/l at 5, 6 and 7 month after planting.
Beavaria bassiana can be spraye 20g/L Or 2) Spray 1% Bordeaux mixture n with quinalphos (2ml/litre of Bord mixture) Swabbing (above five years old only) with mud slurry and coa kerosene mixture at 1:2 proportic recommended as a prophyl measure. This combination can externally applied on the stem height of 1.5m from the soil as we on the exposed roots. Okra All stages Shoot and Fruit borer Spray Coragen (3 ml in10 litres of w 2-3 times at weekly interval. Brinjal Flowering and fruit setting Shoot and Fruit borer Spray Coragen (3 ml in10 litres of w 2-3 times at weekly interval.	Cashew	Pre-bearing stages	Tea mosquito bug	Prophylactic measures:
Cashew Flushing stage Root and stem borer Swabbing (above five years old only) with mud slurry and coakerosene mixture at 1:2 proportion recommended as a prophyl measure. This combination can externally applied on the stem height of 1.5m from the soil as we on the exposed roots. Okra All stages Shoot and Fruit borer Spray Coragen (3 ml in10 litres of we 2-3 times at weekly interval. Remove and destroy affected fruits shoots. Spray chlorantraniliprole (con 3ml per 101 of water) 2-3 times at weekly interval.				Or 2) Spray 1% Bordeaux mixture mixed
only) with mud slurry and coa kerosene mixture at 1:2 proportic recommended as a prophyl measure. This combination can externally applied on the stem height of 1.5m from the soil as we on the exposed roots. Okra All stages Shoot and Fruit borer 2-3 times at weekly interval. Brinjal Flowering and fruit setting Shoot and Fruit borer as Remove and destroy affected fruits shoots. Spray chlorantraniliprole (con 3ml per 10 1 of water) 2-3 times at weekly interval.				• •
Brinjal Flowering and fruit setting Shoot and Fruit borer shoots. Spray chlorantraniliprole (con 3ml per 10 l of water) 2-3 times at weekly interval.	Cashew	Flushing stage	Root and stem borer	measure. This combination can be externally applied on the stem to a height of 1.5m from the soil as well as
setting shoots. Spray chlorantraniliprole (con 3ml per 10 l of water) 2-3 times at we	Okra	All stages	Shoot and Fruit borer	Spray Coragen (3 ml in10 litres of water) 2-3 times at weekly interval.
** Warning colour codes of rainfall (for disaster management)	Ü	setting		Remove and destroy affected fruits and shoots. Spray chlorantraniliprole (coragen 3ml per 101 of water) 2-3 times at weekly interval.

Watch (Be updated)

Warning (Take actions)
